                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tumour associated antique peptides (TAA) may be used for the treatment, prevention and cure of cancer or cancer metastases. The cancer metastases. The cancer metastases The cancer may be breast, bladder, prostate, particles, ovary, thytoid, colon, stomach, head or neck cancer or a carcinoma. The tumour associated antiques are presentable to the immune system by HLA-A2 molecules and are generally between 8 to 10 amino acids in length. The e tumour associated acid antigens are described in records AAY82805-YR28820 are derived from Uroplakin 24. Uroplakin 14. Uroplakin 14. Uroplakin 17. Those described in records AAY82805 are derived from prostate specific antigen (PSA). Those described in records AAY82805 are derived from prostate acid phospholase (PAP). Those described in records AAY82805 are derived from accounts AAY82805 are derived from accounts AAY82805 are derived from prostate acid phospholase (PAP). Those described in records AAY82807 are derived from lactadherin (BA-46). Those described in records AAY82807 are derived from and those described in records AAY82807 are derived from mactadherin and those described in records AAY82807 are derived from mactadherin and those described in records AAY82807 are derived from general are derived from Seconds AAY82807 are derived from accounts AAY82807 are derived from general are derived from Seconds AAY82807 are derived seconds AAY82807 are derived seconds AAY82807 are deri

HMFG, human milk fat globule, astiges, immusegen; vaceine, virucide; epithelium, tumor; breast cancer; monoclonal antibody; MAb.
                                                         A Fortial classificate MANGEL (AAGG183) for the 45 kbs HMIC antigen, a major component of the apical surface of the normal breast epithelial cell, was obtained by POP of CDNA from a lactating breast CDNA library. The C-terminal region of the encoded protein showed 43% identity to corresp. regions of human Factor-V and 38%
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A partial cEMA close EA45-1 (AAQ31195) for the 45 kFs HME3 unligen, a major component of the apical surface of the normal breast epithelial cell, was obtained by PCR of cDNA from a lactating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      46 kD apparent molecular weight human milk fat globule antiqen used in assays to determine the presence of a cancerous tumour of epithelial origin, and in a vaccine against neoplastic tumours
                                                                                                                                                                                                                                                         0;

Exasomes produced by dendition of lese xposed to tumour antiques induce potent immune responses. Lactadherin or variants of lactadherin may be used in the mediation of an immune response. Variants of lactadherin may be used for inhibition and/or stimulation of the cross priming of antiqens and stimulation of the phagocytosis of antiques by dendition and stimulations derived from lactadherin can also be used to monitor an immune response, more specifically a CTL (Tyberovic Telymberyte) assponse and also to predere Telymberyte) assponse and also to predere Telymberytes for a selected antiqen. The present sequence is the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Chimeric isolated (human) lactadherin polypeptide that functions as an adaptor of cross priming to eliminate pathogenic antiqens, e.g. in

                                                                                                                                                                                                                                                                                                                                                                                                                                                        c)
                                                                                                                                                                                                                                                                 The invention relates to a new method for inhibiting cholest-rol uptake in the gut that comprises administration of an inhibitor of an ARCI protein. The method is useful for: lowering levels of LDL (low density lip-qrivity) shalester of by teducing the activity of ABVI protein in the intestinal cells and the absorbance of the ARVI protein in the information that absorbance of the ARVI protein in the individual by inhibiting the activity of the protein; identifying drugs that can bown choiseterol and LDL levels comprises assaying the drug to test if it can bind to an ABVI protein; testing LDL cholesterol lowering agents; and for modulation of ABVI phological activity Sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ABC1, antilipemie, cholesterol, inhibitor, low density lipoprotein; LDE.

```
The invention relates to a new method for inhibiting chalestered sprake in the gut that comprises administration of an inhibitor of an ABC1 problem. The method is useful for: lowering levels of IDL (low density lipoprotein) cholesterol by reducing the activity of ABC1 protein in the intestinal cells and the abundance of the ABC1 protein in the individual by inhibiting the activity of the protein, identifying drugs that can lower serum cholesterol and IDL before, comprises assaying the drug to test if it can bind to an ABC1 protein, resting IDL cholesterol lowering agents, and for modulation of ABC1 biological activity. The present sequences tepresents a homen ABC1 protein partial fragment.

Note: Pages containing part of the present sequence secuns to be missing from the specification; the protein secuns to contain at least 2261 amino acid residues as found by translating the corresponding DNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human, ABCl gene; atheroscietosis, reverse transport, cholesterol; cardiovascular; neurological, Tangier disease, LCAT deficiency; mutant; lecithin-cholesterol acetyltransferase; malaria, diabetes; mutein.

                                                                                                                                                                                                                                                                                                                                                                     ŝ
 The sequence represents the amino acid sequence of human ABCI mutant polypeptide #8. The polypeptide and nucleic acid sequence, primers and probes derived from the ARCI sequence, and vertors are useful for the prevention of atherosciences; in a subject attected by a dystunction in the reverse transport of chalesterol. The polypeptide encoded by the ABCI gene is useful for screening for an active instead of the reverse resulting from dysfunction in the reverse transport of a disease resulting from dysfunction in the reverse transport of cholesterol. The upoleic acids and polypeptides are also useful for treating and preventing cardiovascular and neurological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human, ABCI gene, atheroscherosis, reverse transport; cholesterol;

ARCI is member of the APP-binding classette (ABC transporter) superfamily of proteins, and plays a crucial tole in cholesterol transport, particularly intracellular cholesterol trafficking in monocytes and fibroblasts, being involved in cholesterol trafficking in monocytes and fibroblasts, being lineared in cholesterol cefflux from the cell. The gene encoding ARCI is leasted in cholescape [47], and motors in this some are associated with two genetic HDL (high density lipeprotein) deficiency disorders. Taugier disease (10) and familial HDL deficiency (FHA), these diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human ABC1 cholesterol fransportor, chromosome 9931;
ATF binding cussette, #DL deficiency Afserder, Eigh density lipspretein;

are distinguishable in that TD is an autosomal iccessive disorder, while PHA is inherited as an autosomal dominant trait. Tow levels of HDL ("good choesterol") in the blond correlate with a high lish of cardiovascular disease, particularly 'nentry disease, but also cerebrovascular disease, coronary restencies, and peripheral vascular disease. Conversely, a high level of HDL has protective effects against cardiovascular disease.
                                                                                                                                                                                                                                                                                                                                                             cerebrovascular disease, coronary testenosis or peripheral vascular disease. They may also be used in the treatment of diseases associated with ABC1 biological activity, such as Alrhelmer's disease, Nichann-Fick disease, Huntington's disease, X-linked adrenol-wkodystrophy and cannot Fick the throation specifically excludes pendins with the ward animo acid sequences of general Acression No 'AADHOUN', and XYSVA, and the public acid with the exact sequence as GenBank Acression No ADD1376 1 The

                                                                                                                                              transgents cells and non-homan animits compristing bumon ARC1 morboic acids, and mothods of your therapy for the treatment or prevention of cardiovascular disease comprising the administration of an expression vector exceding ABC1 or an active fragment thereof. The invention also
                                                                                                                                                                                                                                stimulate ABC1 expression and methods of screening for such compounds which stimulate ABC1 expression and methods of screening for such compounds. It further relates to methods for determining whether a patient has an increased risk for cardiovascular disease due to polymorphisms in the ABC1 gone. Haman ABC1 proteins and nucleotides can be used to treat or prevent cardiovascular disease, especially consular uttery disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note: The present sequence is not shown in the specification, but is derived from the native human ABC1 shown on pages 152\cdot157

Human, ATP binding cassette transporter 1, ABC1, coronary heart disease,
                                                                                                                                                         AbcAl (ABCl), the human homologue of mouse ABCAl (94% identity). The sequence was deduced from ABCAL cDNA (see AAS94/54), identified in a differential servering of luman measowers for cholesteric seasitive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          dermatological, atherosclerosis; cardiovascuiat, infiammatory disease, psoriasis, lipid disorder, antibacterial, septic shock, gene therapy, immunosuppressive, lupus erythematosus; rheumatoid arthritis.
                                                                                                                                                                                                                                                                             splenomegaly. ABCAL is also a transporter for interleukin-1 beta, making the gene a candidate for treatment of infiammatory diseases such as the manacola arthritis and sective shock. The invention also provides other coolesterol sensitive AMC genes (see AAZ94775-63) that can be used for diagnostic and therapeutic applications, and for biochemical or cell-based assays to screen for pharmonically artive remaining assays to screen for pharmonically artive remaining assays to screen for pharmonically artive remaining assays are the treatment of such as psoriasis and lupus crythematosus.
                                    Adenosine triphosphate binding proteins useful for identifying agents for treating atheroscierosis and other infimumatory disorders ^{\circ}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                    The present asspecie is that of human AFP binding cassette protein
                                                                                                                                                                                                                     genes, the ABCAL gene maps to chromosome Systral, orstegulated ARCAL is the gene longs involved in the His definitions syndrome Tangier disease, associated with hypertriallyceridemia and

The invention relates to four symmem polymorphisms in the gene considing decreased Apost mediated efflux of choiseterol. The polymorphisms in ARP1 directly affects setliar lipid boundstack. The polymorphisms in the atherogenetic processes the ARC1 polymorphisms are useful for diagnosing and treating lipid disorders, cardiovascular diseases coronary heart disease, atheroseletosis) and inflammatory diseases (psociasis, jupus erythematosus). The identification of ABC1 as a transporter for interleakin-libeta (IL-libeta) identification of ABC1 as a candidate for interleakin-libeta (IL-libeta) identification peneral acadidate for interleakin-libeta (IL-libeta) identifies this gene as a candidate for interleakin-libeta (IL-libeta) identifies this spene as a candidate for interleakin-libeta (IL-libeta) identifies this spene as a candidate for interleakin-libeta (IL-libeta) identifies this peneral architician and septic shock the present sequence is basen ABC1 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is that of the human adenosine triphosphate (ATP) binding cassette transporter I (ARCI) profess. The invention provides 4 common polymorphisms in the ARCI gene (see AA.70314), all of which aiter the amino acid sequence of ABCI and therefore
                 New adenosine triphosphate binding cassette transporter: T gene polymorphisms, useful for diagnosing and treating lipid disorders, cardiovascular diseases and inflammatory diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New adenosine triphosphate binding cassette transporter gene polymorphisms, useful for diagnosing and treating lipid disorders, cardiovascular diseases and inflammatory diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ATP binding cassette transporter 1, ABC1, homen, lipid disorder, elbiteterol, cardiovascular disease, inflammatory disease, artilifammatory; antilipaemin; antipportatio; dermatological; randier disease, coronary heart disease, diagnosis; gene therapy.
